

AMENDMENTS TO THE SPECIFICATION

On page 2, please amend the paragraph at lines 24-31 as follows:

-- The term ENTH (Epsin NH₂ Terminal Homology domain) domain as used herein describes a conserved protein domain which was first found in proteins of the epsin family. Typically, this domain is located at the N-terminus of the proteins and said domain is characterised by 16 absolutely conserved residues: N-x(11-13)-V-x2-A-T-x(34-36)-R-x(7-8)-W-R-x3-K-~~x12~~ x11-G-x-E-x15-L- ~~x11-12~~ x(10-11)-D-x-G-x3-R-x11-D-x7-R. --
